We have tried our best to make sure that every Ricoh drivers download available on this website is absolutely updated to the latest driver version. However, sometimes due to some reasons, a driver may not be updated. In that case, we ask you to report to us so that we can take immediate action and update the drivers.

Q: Why doesn't QProcess take in input in multi thread application? I have a multi thread application that it is connected to a QProcess and it has a text that is written to it by calling writeText() function of QProcess class. My problem is that, when I call the writeText() function, it doesn't take anything and not write anything. But if I call it after some seconds, the text is written. Below is a part of my main.cpp

```
int main(int argc, char *argv[]) { QCoreApplication::setAttribute(Qt::AA_EnableHighDpiScaling); QApplication app(argc, argv); MainWindow *window = new MainWindow; window->setObjectName("main"); window->show(); QProcess* process = new QProcess(); QString data("Hello"); process->start(QProcess::ReadWrite, QString("qrc:/quicksettings.ini")); window->
```
